

KeyNest Exact 90-Day Ad Spend Deployment Strategy

A step-by-step launch plan explained in simple language - without removing the operating detail

The simple idea: Do not spend \$25,000 all at once. Spend a small amount first to learn which ads work. Stop paying for weak ads. Then give more money to the ads that are producing real KeyNest users.

1. The \$25,000 Plan

Think of this like testing lemonade stands. You would not build 100 stands before finding out whether anyone wants the lemonade. KeyNest should do the same thing with advertising. Month 1 is testing. Month 2 is improving. Month 3 is scaling.

Period	Spend	Job
Month 1	\$5,000	Test ads, audiences, messages, signup flow and referrals
Month 2	\$8,000	Remove weak campaigns and put more money behind winners
Month 3	\$12,000	Scale proven campaigns and referral activity
90-Day Total	\$25,000	Validate a repeatable KeyNest growth engine

2. Before Spending: Build the Test Kit

Before turning on serious advertising, prepare roughly **12-20 short ad variations**. Do not spend the whole creative budget on one polished commercial. Social platforms reward experimentation. A simple phone-style video with a strong first sentence can outperform an expensive production.

Test several messages: **"Find properties before everyone else."** **"Share homes. Earn KeyNest Points."** **"Get rewarded for referring buyers and renters."** **"Your real estate network can actually pay you."** **"See what is available in your neighborhood."** **"Realtors, investors, buyers and regular people - one real estate network."**

Then make variations. Change the person speaking, first three seconds, property shown, headline, call to action and length. This is called **creative testing**. You are giving the market choices and allowing the data to tell you what people actually respond to.

3. Days 1-7: Spend Only \$700

Start at **\$100 per day for seven days**. Put about **\$50/day into Instagram/Meta** and **\$50/day into TikTok**. Run approximately 4-6 ad concepts on each platform. At this stage, the question is not "Did KeyNest go viral?" The question is "Which message makes the right people click, register and actually use the product?"

Platform	Daily	7-Day Spend	What to Test
Instagram / Meta	\$50	\$350	4-6 creatives, audience groups, hooks and property visuals

Platform	Daily	7-Day Spend	What to Test
TikTok	\$50	\$350	4-6 creator-style videos, hooks and calls to action
Total	\$100	\$700	First controlled learning period

Do not judge ads by views alone. Record **clicks, registrations, cost per registration, activation rate and cost per activated user**. A person who watches a video is not yet a KeyNest customer.

4. Days 5-7: Kill the Losing Ads

Suppose Ad A spends \$150 and produces 30 registrations. That is **\$5 per registration**. Ad B spends the same \$150 but produces only 5 registrations. That is **\$30 per registration**. If the users are similar quality, Ad A deserves more money and Ad B should be paused.

Simple rule: Do not keep feeding money to losing ads because you personally like the design. The customer decides the winner.

5. Days 8-14: Increase to About \$150/Day

Take roughly the best **3 Instagram ads and 3 TikTok ads**. Increase spending to approximately **\$150/day**: around \$80/day Meta and \$70/day TikTok. Seven days at this pace is approximately **\$1,050**. Combined with Week 1, KeyNest has now spent roughly **\$1,750**.

6. Start Retargeting

Some people will watch a KeyNest video, visit the website, look at properties or begin registration and then leave. Retargeting means showing another KeyNest ad specifically to those people because they already know the brand.

Examples: **"You checked out KeyNest. Finish creating your free account."** **"Still looking? New properties were added."** **"Join KeyNest and start earning Points when you refer people."**

Start retargeting around **\$20-\$30/day**. Do not put too much money here initially because the retargeting audience is still small.

7. Days 15-30: Move Toward \$200/Day

By the second half of Month 1, money should be concentrated on campaigns that have demonstrated useful behavior. A working example is below. The exact daily numbers can move slightly so Month 1 finishes near \$5,000.

Campaign	Example Daily Spend
Meta prospecting	\$80/day
TikTok prospecting	\$70/day
Meta retargeting	\$25/day
TikTok retargeting	\$15/day
Referral campaign	\$10/day
Approximate total	\$200/day

8. Build the KeyNest Referral Machine

This is the part that can make KeyNest more than another company buying social-media ads. Imagine KeyNest pays \$10 in advertising to acquire one active user. That user invites three other people. The original \$10 helped create four users instead of one. That is the beginning of a growth loop.

Inside KeyNest, make the reward system obvious: **Invite Friends -> Earn Points -> Use Points to Promote Yourself or Properties.**

Action	Example Reward
Friend registers	+100 Points
Friend verifies profile	+100 Points
Qualified listing share / approved activity	+25 Points
Qualified referral or lead event	+500 Points

These are example economics, not final payout rules. KeyNest needs fraud controls so users cannot manufacture fake accounts, fake referrals or fake leads simply to collect rewards.

9. Give Points Useful Things to Buy

The smartest version does not require KeyNest to cash out every point. Points can buy **visibility inside KeyNest**, which has value to agents, sellers, creators and property promoters while keeping more of the reward economy inside the platform.

Points	Example Redemption
500	24-hour property boost
1,000	Featured listing placement

Points	Example Redemption
1,500	Featured member/profile placement
2,000	Additional advertising credit
3,000	Premium badge or verification-style benefit
5,000	Neighborhood sponsorship / premium local placement

KeyNest can later sell additional point packages as an internal advertising product. This creates a possible revenue stream: users earn some promotional currency through participation and can purchase more when they want additional exposure.

10. Month 2: Deploy \$8,000

Month 1 asked, "**What works?**" Month 2 asks, "**How much more of the winning behavior can we buy without destroying the economics?**" Target roughly \$250-\$300/day and keep reallocating toward the campaigns producing quality activated users.

Bucket	Example Daily Spend
Meta	\$100/day
TikTok	\$90/day
Retargeting	\$40/day
Creator ads	\$30/day
Referral campaigns	\$20/day
Example total	\$280/day

\$280 x 30 days would be about \$8,400, so adjust individual days or budgets slightly to remain near the \$8,000 monthly target.

11. Add Local Creators in Month 2

Recruit people whose existing audiences overlap with KeyNest: **local realtors, NYC apartment creators, NJ real-estate creators, property-tour creators, finance creators, first-time-buyer creators and neighborhood pages.**

The content should feel like a person discovering and using a useful product, not a stiff television commercial. A creator might demonstrate how they found a property, shared it, invited someone or earned points. Then KeyNest can identify the best creator content and use those winning videos as paid ads.

12. Month 3: Deploy \$12,000

By Month 3, KeyNest should have much better answers about its winning audience, creative style, geography, signup offer, referral offer and landing page. This is when spending can move toward approximately **\$350-\$450/day**.

Bucket	Example Daily Spend
Meta	\$140/day
TikTok	\$130/day
Retargeting	\$50/day
Creators	\$50/day
Referral campaign	\$40/day
Example total	\$410/day

\$410 x 30 days is approximately \$12,300. Adjust slightly to stay close to the \$12,000 target. The purpose of the example is to show the relative allocation, not force an identical spend every day.

13. Start Small Geographically

Do not begin by trying to make KeyNest popular across the entire United States. Concentrated activity can make the platform feel much more alive. A strong starting footprint is **New York City + North Jersey**, with testing around Manhattan, Brooklyn, Queens, Jersey City, Hoboken, Fort Lee, Edgewater, Bergen County, Newark and Elizabeth.

Ten thousand scattered users across America may barely notice each other. Ten thousand relevant users concentrated in the same regional property market can create much more sharing, inventory discovery, referrals, leads and word of mouth.

14. The Number to Watch Every Morning

The key number is **Cost Per Activated User**. An activated user is not simply someone who registered. It is someone who did something useful: viewed and saved properties, shared a listing, completed a profile, invited a member, generated a qualified lead, earned/spent points or returned to use the platform.

Example: KeyNest spends **\$1,000**. It gets **200 registrations**, but only **100 people actually use the platform**. The cost per activated user is **\$10**. If 40 of those people invite others and those invitations create another 60 active users, the same \$1,000 helped produce 160 active users. The effective acquisition cost becomes approximately **\$6.25 per user**.

15. The Growth Loop You Are Trying to Build

Instagram/TikTok ad -> person discovers KeyNest -> creates free account -> looks at properties -> shares a property -> friend clicks -> friend joins -> original user earns Points -> original user spends Points promoting a property/profile -> more people see it -> more people join -> more referrals -> more Points -> more promotion -> repeat.

Paid social is the spark. The referral system is supposed to become the engine. If every new user requires KeyNest to buy another ad forever, the platform is not truly viral. If existing users consistently bring in additional users, the economics begin to compound.

16. What NOT to Celebrate

Do not report: **"We spent \$20,000 and got 3 million views."** Views can be useful, but they do not prove the business works.

A much better report is: **"We spent \$20,000, acquired 3,000 active members, those members produced 1,200 additional referrals, 500 property leads and 200 listing promotions."** That connects marketing dollars to actual platform activity.

17. Exact 90-Day Deployment Summary

Stage	Spend	Action
Days 1-7	\$700	\$100/day. Test Meta and TikTok.
Days 8-14	\$1,050	~\$150/day. Keep the best 3 ads on each platform.
Days 15-30	~\$3,250	Move toward ~\$200/day; add retargeting and referral ads.
Month 1	\$5,000	Finish testing and establish baseline economics.
Month 2	\$8,000	Scale winners; add creators and stronger referral promotion.
Month 3	\$12,000	Scale proven campaigns at roughly \$350-\$450/day.
TOTAL	\$25,000	Do not scale beyond this until retention/referrals/leads are proven.

18. The Rule for Scaling Beyond \$25,000

Do **not** automatically increase spending just because the 90 days ended. Increase toward approximately **\$20,000-\$30,000 per month** only if the data shows that users are returning, sharing properties, inviting people, generating qualified leads and using the points/promotional system. If those behaviors are weak, fix the product, onboarding, offer, creative or referral mechanics before buying more traffic.

In 10-year-old language: First make sure the little fire is actually burning. Then add more wood. Do not pour \$30,000 worth of gasoline onto something that has not caught fire yet.

19. Daily / Weekly Operator Checklist

Every day: check spend, registrations, activated users, cost per activated user, obvious ad failures and technical problems. **Every 3-4 days:** compare creatives and audiences, pause clear losers, check whether retargeting is growing and inspect referral quality. **Every week:** calculate total spend, registration CPA, activation rate, cost per activated user, referral users, qualified leads, retention and the percentage of new users coming from existing members. **Every month:** decide what deserves more budget and what needs to be rebuilt.

20. Final Operating Principle

KeyNest should use Instagram and TikTok to **buy the first wave of attention**. The product then needs to turn that attention into an owned network through useful property discovery, sharing, referrals, points and internal promotion. The long-term goal is not to pay Meta and TikTok forever for every new user. The goal is to make each acquired KeyNest member capable of helping acquire the next member.

Planning note: These are strategic budget examples, not guaranteed performance forecasts. Actual advertising costs and conversion rates depend on creative quality, geography, audience competition, platform auctions, product-market fit, tracking quality, landing-page performance, retention and execution. Point values and rewards should be tested economically and reviewed for fraud, consumer-protection, real-estate referral, advertising and other applicable compliance requirements before launch.
